

# Rugged Robot App Information

## The free downloadable Rugged Robot App information sheet

At TTS, we're always looking for ways to enhance the learning experience, and with Rugged Robot, We wanted to offer even more opportunities for exploration and creativity. That's why we developed the free downloadable Rugged Robot app. A piece of software designed to connect with your Rugged Robot via Bluetooth, expanding its capabilities and taking your programming adventures to the next level.

So, what can this app do? Let's take a look!

- Connect to your Rugged Robot via Bluetooth
- See the programmed sequence in order to correct any errors (debugging)
- Record audio commands for the directional controls on the app, supporting pupils with hearing back the steps or those with English as an additional language.
- Use a 'repeat' function for commands (decomposition and looping)
- Extend children's learning by 'hiding' commands e.g. Can you get to a certain destination without using the forward command?
- Rename your Rugged Robot
- Connect each Rugged Robot to a different tablet to avoid any classroom confusion!

The free downloadable app is available on the App Store or for android devices on Google play.

Please note: This app is NOT compatible with mobile phones.
